Appl. No. 09/641,081 . . . Amdt. Dated December 15, 2004 Reply to Office Action Dated June 15, 2004

## Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

## Listing of Claims:

Claim 1 (previously amended): A method for identifying a transcribed region of interest of a genome comprising:

- a) Hybridizing a plurality of nucleic acid probes with a nucleic acid sample, wherein said nucleic acid sample comprises transcripts from said genome, wherein said probes are targeting an area of said genome; and
- b) Identifying said transcribed region as a region of said genome where hybridization of all consecutive probes targeting said region are above a threshold value.

Claim 2 (original): The method of claim 1 wherein said probes are oligonucleotides.

Claim 3 (original): The method of claim 3 wherein said oligonucleotides are immobilized on a substrate.

Claim 4 (original): The method of claim 1 wherein said threshold is non-specific binding.

Appl. No. 09/641,081 Amdt. Dated December 15, 2004 Reply to Office Action Dated June 15, 2004

Claim 5 (currently amended): The method of claim 4 wherein said non-specific binding is measured using a probe designed to-contain containing at least one mismatched base.

Claim 6 (currently amended): The method of claim 1 further comprising:

<u>c)</u> Identifying a sub-region wherein hybridization of said probes targeting said <u>sub-region</u> <del>sub-regions</del> is similar <del>and</del>, thereby indicating said sub-region as said transcribed region.

Claim 7 (original): The method of claim 6 wherein said genome is from a prokaryote.

Claim 8 (original): The method of claim 7 wherein said transcribed region is an operon.

Claim 9 (currently amended): The method of claim 8 claim 7 wherein said prokaryote is bacteria.

Claims 10-14 (cancelled)
